

ENM232-8VIA

Encore's 7.1 Channel Sound Card

With Encore Electronics 8 Channel PCI Sound Card, you can enjoy a rich theater high quality surround sound while watching videos, playing games, or just plain listening to the music from your desktop computer. ENM232-8VIA is definitely a high-value upgrade that will deliver high quality audio to your computer audio experience. The VIA Chipset makes audio clearer and more vibrant. It gives far more audio quality than those built-in to the computer motherboards. When used with the 7.1 Channel Speakers, it brings more real life audio sound, high quality base and surround sound experience.
